Khaldoun Zreik: Activités de recherche
Domaines de recherche (en cours)

- HyperUrbain
- Conception des objets communiquant (C2D)
- Computer & Media Arts (CMA)
- Approche structurelle pour l'extraction d'information à partir de documents semi-structurés ([approche de text mining](#))
- Apprentissage interactif

Domaines d'application

- Communication dans les processus de conception
- Conception d'information pervasive
- Conception de systèmes d'information mobile
- Conception de systèmes d'information urbain
- Conception des Systèmes à Bases de Connaissances
- Conception des systèmes interactifs de gestion des crises et des catastrophes
- Design Management
- Conception architecturale assistée par ordinateur
- Dialogue Homme Système
- Gestion numérique de Patrimoine
- Système de numérisation intelligent
- Systèmes interactifs d'aide à la décision
- Mobile et télé-activités
- Multilinguisme (documents Web)

Direction des thèses

- 6 Doctorants en cours : Université Paris 8
- 20 thèses ont été soutenues : Université Paris 8, Université de Caen, Université Mohamed 5 (Rabat, Maroc) and Université Paris 6 (co-directeur)
- 1 HDR

Brevets (2)

- (2003) Système de gestion de crises et de catastrophes
- (2004) Editeur de documents numériques pervasifs

Publications

- Livre (sous la direction) : 7
- Actes de colloques (sous la direction) : 24
- Rédacteur en chef invité (revues internationales) : 6
- Communication dans des revues internationales : 15
- Chapitres : 9
- Communication dans des colloques internationaux : 61
- Communication dans des colloques nationaux : 3
- Communication dans des ateliers internationaux (avec actes) : 6
- Communication dans des ateliers nationaux (avec actes): 7

Groupes de travail : niveau international

- Membre du « Technical Committee on Computer Supported Cooperative Work in Design » de l'IEEE SMC . <http://www.ieeesmc.org/technicalcommittees/index.html> (2008/..)
- Membre du conseil d'administration de « Design Foundation » Delft - Pays Bas, (2005/..)
- "Honorary Member" de "Intelligent and Interactive Systems Research Group". University of Paisley, Department of Computing and Information Systems (1999/..)
- Membre du comité européen d'orientation scientifique de EG-SEA-AI : European Group for Structural Engineering Applications of Artificial Intelligence (EPFL, Suisse) (1993/2004).
- Membre du groupe européen Ibouw (Information in Architecture, Building & Construction) { <http://www.bk.tudelft.nl/informatica/toi/research/ibouw/>} (2001/..)

Groupes de travail : niveau national

- ARTIST (A ppropriation par la R echerche des T echnologies de l' IST), INIST – Nancy . <http://artist.inist.fr/> (2005/..)
- RTP 33 . Documents et contenu : création, indexation, navigation. Animateur : Ghislaine Chartron. URL : <http://rtp-doc.enssib.fr>
- Membre de l'AFIHM : Association Francophone d'Interaction Homme Machine (1996/..)

Research Areas & Projects
HyperUrban (HyperUrbain)

The concept of HyperUrban (Khaldoun Zreik, 2008a, 2008b) HyperUrban Conference, HyperUr Blog) represents the City (as Urban Living Space) within its HyperInformational and HyperCommunication spaces (the new Urban HyperSpaces) and those new HyperSpaces with "City" (where citizens and new citizens could be, act and communicate). As concept it integrates HyperSpaces Design (mainly Ergonomic Urban Information Design, Ergonomic Urban Commun Design) and City Design (mainly Urban Planning).

Communicative Document Design (C2D)

Today most of Document ought to be HyperDocument (Interactive Multimedia & Ubiquitous Doc C2D observes that Document is a piece of information and a support of communication. Thus Designing an HyperDocument should consider ergonomic approaches for: information design, hyperinformation design and ergonomic communicative object design (i.e. behaviour, content, function and structure).

Computer and Media Arts

Nowadays, we witness an enlargement of Computer & Media Arts (CMA) boundaries mainly led unusual development. Distance between Art and Science has narrowed to the point that CMA is quite an independent and autonomous field starving to reach its maturity. From this perspective CMA cannot evolve separately from the IT development strategy. Today, along with digital content production, which is in some measure produced accordingly to collective intelligence schemes, we observe emerging forms of CMA that strive to develop new ways to interact with digital content, artefacts that repurpose digital content and new paradigms that aim to make sense of CMA.

Structure Driven Information Extraction Approach

In the problematic of Information Design we have been rapidly interested in the important multilingual phenomenon and focused our approach on the importance of information structure. Multilingual Document (MWD) processing has become one of the major interests of research and development in the area of information retrieval. We have developed several approaches adapted to Multilingual Document Mining, and experimented them on Arabic, Chinese and Vietnamese Languages.

The Paragraphe research laboratory

Paragraphe, is an interdisciplinary research laboratory attached to the doctoral School (N°224) Cognition, Langage and Interaction (CLI) of the University of Paris 8, Vincennes - Saint-Denis. The laboratory is composed of four teams and a complementary group of research:

- "Cybermédia, Interactions, Transdisciplinarité et Ubiquité" (CITU - Paragraphe)
- "Écritures et Hypermédias Numériques" (EHN)
- "Compréhension, Raisonnement et Acquisition de Connaissances" (CRAC)
- "Conception, Création, Compétences, Usages" (C3U)

They meet indeed in a common interest for the whole of the implications of information technologies, that it is through technical concepts like the search engines, the hypertexts, the hypermedias, the data-processing tools, the applications which result from it and the human activities that they solicit or through concepts concerned with the human and social sciences (ergonomics, cognitive science, sociology, philosophy...) like the social stakes of these technologies, their conceptualization or fundamental problems on the nature of information and knowledge and the more general questions of the insertion of the Information and Communication Technologies (ICT) in the loop of the human activity

Interactive Learning Support Design

The Information Society is burgeoning and new technology is shifting educational, learning and teaching paradigms. Virtual Universities, Cyber-Classrooms, e-Learning, Wireless Based Learning, Human-Robot Interaction, Data Mining, Text Mining, Web Semantic, etc. may be cryptic catch phrases now but will be within the main learning and teaching norm in a very near future. Mining tools have become the popular Machine Learning issues. Our project is based on the fact that Machine Learning, Human-Robot Interaction and e-Learning system have proved the necessity of integrating these three levels of interactive approaches. This means most validated information has to be retrieved, extracted and transferred within a Human Computer Collaborative approach in which both Human and Machine interact with each other. In every validated information production process roles between users and computers are continually exchanged. Sometimes decisions are owned and controlled by the machine and sometimes by users. In summary, Interactive Learning tools have to adopt a user driven design approach. They should learn from and about their users. Both E-learning systems and Humanoid Robots must embed some machine learning tools. Moreover, an efficient Interactive Learning Support (during information construction or validation) has to consider very powerful pedagogical and sensitive approaches in order to be able to learn from their users. From this perspective we can observe that distances between Interactive Machine Learning, Humanoid Robot and e-Learning have become closer and closer.
